**CHESAPEAKE PETROLEUM IS AN
AUTOMOTIVE LIFT INSTITUTE CERTIFIED LIFT
INSPECTION SERVICE PROVIDER**

CHESAPEAKE PETROLEUM'S LIFT INSPECTION PROGRAM

The Annual Lift Inspection will take approximately 1/2 hour per lift and include the following:

- Grease and/or lubricate any lift component as needed
- Adjust cables and/or chains including mechanical lock cables
- Tighten any loose bolt and/or fitting
- Torque anchor bolts
- Clear any debris from the overhead channel
- Clear any cable and/or hose obstruction to prevent rubbing or tangling

If additional repairs are found to be needed during the annual inspection, the Service Technician will discuss these repairs with the Manager, Supervisor or other authorized person for the company.

Once a lift passes the inspection, the Service Technician will do the following:

- Provide enough Annual Inspection Certification Labels to label each lift
- Punch out with a hole-punch on the label, the month the inspection was performed and affix the label to the lift
- Record the Label's control Number on the Lift inspection form

The price for the annual lift inspection is based on Type of Lift and Quantity of Lifts being inspected.
